Successful completion by attending entire workshop and successfully passing post-test (Score of 80%)

Patricia has enjoyed a varied background in her 40 years as a therapist. She has been practicing hand therapist for over 33 years and a CHT for 26 years. Patricia has taught live continuing education seminars on various hand therapy topics since 1992. After several years of focusing on clinical practice, Patricia has returned to her role as a professional educator since 2014. She is enthusiastic and excited about sharing her extensive background and experience with both physical and occupational therapists and assistants

The assignment of AOTA CEU’s does not imply endorsement of specific course content, products, or clinical procedures by AOTA.
This is an exciting course which offers therapists an opportunity to expand their care of hand injuries with new depth and confidence. A broad range of topics are covered which will benefit both experienced therapists and those just entering the field. The multiple tissue effect of immobilization during healing versus movement and stress are compared. This is followed by an analysis of current therapeutic techniques and the use of dynamic/ static progressive splints and serial casting techniques for the management of hand trauma. On Day two, complex injuries to the hand are explored with lively group discussion and problem solving. Topics on day two include care of grafts and flaps, free tissue transfer, care of revascularizations, replants and mutilating injuries. Participants are invited to share cases from their own practice. No prerequisites for this course!

Objectives/Learner Outcomes:
* Explain the effect of immobilization on various tissues including ligaments, bone, muscle, skin fascia
* Describe methods and theories for mobilizing tissues utilizing dynamic/ static progressive splints, as well as serial casting techniques.
* Demonstrate manual soft tissue release techniques for skin, musculotendinous, and fascial adhesions.
* Perform the basic techniques of manual mobilization of the finger joints.
* Demonstrate techniques for manual lymphatic drainage of the U/E (MEM) and finger/forearm bandaging for edema management.
* Explain the various types of skin grafts, pedicle flaps and free tissue transfers for U/E injuries
* Describe the categories of complex trauma/mutilating injuries and explain the unique concerns of each type.
* Identify the psychological reactions to trauma and demonstrate awareness of testing tools used to assess psychological reactions.

Course Agenda Day 1
Course Hours 8:30 am – 5:00 pm
Includes 1 hour lunch and 2 - 15 minute breaks

* Tissue response to injury
* Managing the stiff hand
* Scar modification
* Static Progressive Splinting
* Soft tissue and joint mobilization
* CMMS for increasing ROM
* MEM for U/E Trauma lecture and labs
* Bandaging for Edema Control
* Edema evaluation

See website for hour by hour time schedule

Course Agenda Day 2
Course Hours 8:30 am-5:00 pm
Includes 1 hour lunch break and 2 – 15 minute breaks

* Skin grafts and flaps
* Free tissue transfer
* Sensory Evaluation
* Sensory Re-education
* Lecture and demonstration
* Mutilating injuries to the hand
* Psychological Considerations
* Therapy for the complex injury
* Digital Replantation
* Thumb Reconstruction
* Case Study – Participant Presentations and discussion
* Exam
